

Project Report: Phase 1

Course: CSCI390 – Web Programming

Project Title: SkillShare LIU: Academic Peer Support Platform

Student Name: Malaki Ramzi AL hakim

Student ID: 12133957

Department: School of Art & Science

Date: April 21, 2026

1.

Abstract

SkillShare LIU is a web-based platform designed to facilitate peer-to-peer learning within the Lebanese International University community. The goal of this project is to provide a clean, organized, and responsive interface where students can find tutors for specific academic courses. By "thinking like a user," the site was developed to offer clear navigation and immediate access to tutoring resources. The project focuses on a professional aesthetic using a green, white, and red color palette, ensuring a high-quality visual experience across mobile, tablet, and desktop devices through Responsive Web Design.

2.

Objectives

The primary objectives of this phase include:

- Designing an original website from scratch to represent an academic interest area.
 - Demonstrating a strong understanding of HTML structure and CSS styling.
 - Implementing Responsive Web Design to ensure the layout grows naturally and accommodates different screen sizes.
 - Creating a user-centric experience that identifies the most important information for students.
-

3.

Technologies Used

To meet the assessment criteria for this course, the following technologies were utilized:

- **HTML:** Used for the semantic structuring of the website pages (Header, Main, Sections, and Footer).
- **CSS:** Used for all visual styling, including the green, white, and red color scheme, and layout positioning.
- **CSS Flexbox & Media Queries:** These were the primary tools used to achieve the "Responsive" requirement, ensuring the site is interactive and usable on all devices.
- **VS Code:** The primary code editor used to write and organize the source files.
